CybriantXDR

Prevent

The number one way to mitigate the damage from any attack on your environment is to prevent it from happening in the first place.

It's vital to protect your organization from all points of entry and ensure your organization has visibility of all the points of entry that are being accessed by authorized personnel.

CybriantXDR combines the latest technology utilizing machine learning and artificial intelligence with experienced oversight to identify and terminate malicious software before it can execute.

Detect

The longer it takes to discover and remediate the cause of a breach, the greater the damage to your company's reputation and business operations.

To limit exposure and to prevent sophisticated breaches, organizations need a team of experienced security analysts working around the clock dedicated to piecing together any evidence or signatures of malicious behavior.

CybriantXDR offers that capability and alerts your organization only when a credible threat is detected.

Remediate

When a cyber threat is detected, quick response and remediation is essential to limit impact to your organization's business operations.

Many IT departments don't have the resources to completely remediate the threat, or the measures required to regain function are laborious and time consuming.

CybriantXDR remediation capabilities can limit the interruption to your business and restore normal operations rapidly.

CybriantXDR Benefits

True Zero-Day Prevention

Active Vulnerability Scanning

Machine Learning Based Prevention

Integrated Threat Intelligence

Analysis of Both Internal and External Traffic

Ongoing Regulatory Compliance Support

CybriantXDR Means Visibility and Response Across Your Entire Organization

Detect Advanced Persistent Threats

New attack vectors and vulnerabilities are discovered every day. Your organization likely has firewalls, IDS/IPS, and AV solutions installed that look for malicious activity at various points within the IT infrastructure, from the perimeter to endpoints.

However, many of these solutions are not equipped to detect zero-day attacks and advanced persistent threats. CybriantXDR prepares your organizations for ever-changing threats.

Annihilate the Threat in its Tracks

Not only does CybriantXDR help reduce the time between breach and detection, but we can also help stop the threat before it can fully execute.

By tracking all processes, our team is able to detect malicious activities and use behavioral AI technology to respond at top speed. We can detect and stop file-based malware, scripts, weaponized documents, lateral movement, file-less malware, and even zero-days.

Actively Remediate Identified Vulnerabilities

Continuous vulnerability scanning is an important part of your overall security strategy. CybriantXDR provides a risk-based vulnerability management program, so you are able to take the logical next step to reduce your threat surface by focusing on the top priorities for remediation.

By using risk prioritization, our security experts have the skills to understand exposures in context. They will prioritize remediation based on asset criticality, threat context, and vulnerability severity. Our reporting will help you prioritize which exposures to fix first, if at all, and apply the appropriate remediation technique.
